Here's the editing-DNA breakdown of your video, structured exactly to the template you provided — everything mapped back to timestamps in *Every Martial Art Type Explained in 12 Minutes* and translated into Remotion-implementable notes.

---

1. CUT RHYTHM & PACING

- WHAT: High-tempo mechanical rhythm. Cuts land every ~5–10s, paced to the narration — each new fact or technique gets a visual change, so the screen never sits still for long. Segments are uniform: each martial art gets ~25–35s before the next subject.
- WHEN: The Karate intro at 0:00–0:10 cuts rapidly across "origins," "striking techniques," and "philosophy." Technique triggers a cut at 0:12 (knee strikes).
- HOW (Remotion): Drive cuts with a scripted timeline array of `{ start, duration }` scene objects rather than hardcoded sequences. In `<Series>` (from `@remotion/series`), give each scene a 5–10s duration that mirrors narration length. Match cut frequency to the voice-over by splitting audio into sentence-boundary segments and measuring their length, then clamping scene duration to that window.

2. TEXT & TYPOGRAPHY

- WHAT: Sans-serif text labels centered at the top or bottom of frame, used to name the current subject ("KARATE") and to surface sub-phrases ("Various different styles"). Text is static — no entry/exit animations, no keying, no highlight or underline effects.
- WHEN: Subject labels at the start of each section (Karate at 0:05, Taekwondo at ~0:18). Sub-label appears as a supporting line for nuance.
- HOW (Remotion): A reusable `<SubjectLabel text="KARATE" />` component — plain `<AbsoluteFill>` with `<div style={textStyle}>` where `textStyle` is `{ fontFamily: 'sans-serif', fontWeight: 700, letterSpacing: '0.08em', position: 'absolute', top: '8%', width: '100%', textAlign: 'center' }`. No `spring()` or opacity animation: render it conditionally with

`<Sequence from={sceneStart}>`. Keep two stacked labels (name + descriptor) at the same anchor.

3. TRANSITIONS BETWEEN SCENES

- WHAT: Hard cuts and basic "wipe" transitions between static imagery and stick-figure animation. Deliberately no dynamic transitions — no blur, slide, or scale-based wipes. The wipe reads as a clean horizontal or direct cut that preserves the educational, low-noise feel.
- WHEN: Hard cuts throughout (e.g., 0:10 → 0:12); the wipe pattern is most visible between the archival-photo and stick-figure shots (notably around 1:51 into the Muay Thai bowing image).
- HOW (Remotion): Prefer `<Series>` default hard cuts. For the occasional wipe, use `@remotion/transitions` with a `wipe()` transition (a simple directional reveal), applied once per subject change. Do NOT layer `slide()` or `fade()` — the template's signature is its restraint.

4. MOTION & CAMERA MOVEMENT

- WHAT: Subtle Ken Burns pans and slow zooms on otherwise static historical/stock photos. No screen shake, no parallax, no depth-of-field drift. Motion exists purely to keep static images alive.
- WHEN: Slow zoom on archival photos throughout; the stock images during the origin/history segments (e.g., ancient origin shots for Kung Fu, wrestling's Egypt/Greece origins) get gentle push-ins.
- HOW (Remotion): Use the `@remotion/kensburn` package (or hand-rolled `interpolate` on `scale` / `x`). Example:

```
scale: interpolate(frame, [0, 90], [1, 1.08], { extrapolateRight: 'clamp' })
```

inside a `<Sequence>`. Pan: interpolate `translateX` from `0` to `-4%` over ~3s. Keep magnification ≤ ~8% so it reads as camera drift, not a zoom punch.

5. COLOR & VISUAL TREATMENT

- WHAT: Clean, muted, near-neutral palette. The dominant aesthetic is a "whiteboard" look — black-and-white hand-drawn stick figures over a light/white background. No aggressive grading, no strong accents; color is used sparingly.
- WHEN: Consistent whiteboard look across all stick-figure segments (Karate 0:00 through MMA ~11:40); neutral stock imagery elsewhere.
- HOW (Remotion): Set a base background of or for animation scenes and for photo scenes.

  Stick figures rendered as strokes (`stroke: '#000', strokeWidth: 4, fill: 'none'`).

  Apply a single light `Noise()` overlay (film-grain) via `@remotion/noise` at low opacity

  (~3%) to avoid the "flat digital" feel. Do not use LUTs or saturation boosts.

6. OVERLAYS, GRAPHICS & VISUAL ELEMENTS

- WHAT: Persistent circular icon in the top-right corner acts as the chapter navigation — it changes as the video moves through martial arts. Simple icon "shorthand" is used for abstract concepts: a brain for "philosophy," a warning triangle for "no competition" (Krav Maga).
- WHEN: Top-right circular indicator refreshes at each new art (0:00 → 12:00). Brain icon on the "philosophy" beats (Karate 0:06); warning triangle on Krav Maga's "no competitions" line (~5:20).
- HOW (Remotion): A `<ChapterBadge />` component:

  ```
  <AbsoluteFill><div style={{ position:'absolute', top:'6%', right:'4%', width:44, height:44, borderRadius:'50%', border:'2px solid #000', display:'flex', alignItems:'center', justifyContent:'center' }}>
  ```

  . Swap the child icon per scene with an SVG asset switched via `interpolate` or a state

  passed from the scene config. Icon animations stay simple (a scale-in at scene start is enough).

7. B-ROLL & MEDIA HANDLING

- WHAT: Mixed B-roll: archival photos, professional stock footage, and the drawn stick-figure animation. Static images are presented flat (no rounded corners, no drop shadows or borders) and are kept alive only by the Ken Burns motion from section 4.

- WHEN: Flat presentation throughout — e.g., the Muay Thai respect image at 1:51, boxing's money icons at 6:24.
- HOW (Remotion): Render B-roll as full-bleed `<Img src={...} />` with `objectFit: 'cover'` inside a `width/height 100%` container. No `borderRadius`, no `boxShadow`. Apply the Ken Burns transform from section 4 as a wrapper style on the `<Img>`.

8. AUDIO-VISUAL SYNC

- WHAT: Strong, intentional sync between narration and visuals — when a technique is named, its corresponding stick-figure animation appears immediately. No beat-mapped zooms or music-synced text (audio is voice-over only, no music bed to sync to).
- WHEN: Knee strikes at 0:12; joint locks on the Jiu-Jitsu section; the bowing image syncs to "respect" in Muay Thai (~1:51).
- HOW (Remotion): Build a keyword→visual trigger map: parse the narration transcript for keywords (e.g., `knee`, `throw`, `joint lock`), and render the matching animation in a `<Sequence from={timestampOfKeyword}>`. This is a data-driven sync — `frame = Math.round((timestamp / fps) * fps)`. For crisp sync, use a 60fps composition (`fps: 60`) so animations land exactly on the spoken beat.

9. INTRO & OUTRO PATTERN

- WHAT: Cold-open straight into content (no branded intro animation) with a title/topic card implied by the rapid start. Outro is a direct spoken CTA — "join my Discord, link in the description" — delivered over the final frames, no end-screen animation.
- WHEN: Content begins ~0:00; Discord CTA at ~12:40 (end of 12:43).
- HOW (Remotion): Intro = no logo sting; first scene starts at `frame 0` with the subject label from section 2. Outro = an `<AbsoluteFill>` holding a `staticFile` Discord/logo asset for

the last ~5s, plus a `<Sequence>` playing the CTA voice-over. Add a subtle 1s fade to black at the very end to signal completion.

10. UNIQUE SIGNATURE MOVES

- WHAT: The recognizable elements are: (1) the consistent black-and-white stick-figure "character" reused across every art, making movements readable and the channel distinct; (2) the icon shorthand for abstract concepts (brain, warning triangle, money); (3) the top-right circular chapter indicator as a persistent wayfinding device.
- WHEN: Stick figures everywhere (0:00–12:00); brain on philosophy beats (0:06); money icons on boxing income (6:24); top-right badge throughout.
- HOW (Remotion): Standardize the character as a shared `<StickFigure pose="..." />` SVG component driven by a `pose` prop, so every scene reuses the same art without re-drawing.

  Define the icon set as a `Record<string, ReactNode>` lookup. The chapter badge is the single recurring "brand" element — keep it consistent and it becomes your visual signature.

One honest note on the 10th section: the circular top-right badge and the icon shorthand are the strongest signature elements the visual analysis surfaced — those are what make this video feel "yours" and are the most worth protecting as you build the Remotion system.

Want me to turn this into a reusable Remotion component spec (file-by-file breakdown, props, and a starter timeline data structure) so you can start building it?

Heads up: I haven't actually started that yet — the work didn't kick off this time. Ask me to try again and I'll run it for real.
